

FNOL Registration and Triage — Procedures

[Claims Adjuster Reference](#) · [Pinecone RAG Knowledge Base](#) · [IRDAI Motor Insurance](#)

POC SCOPE — Single-channel intake via Word Registration Form and document upload. Multiple intake channels are out of scope.

1. What is FNOL and what is a triage decision?

FNOL (First Notice of Loss) is the initial formal notification to the insurer when a policyholder reports a vehicle-related incident that may give rise to a claim. It is the entry point of the claims lifecycle. FNOL is a report — not a claim decision. No coverage determination is made at FNOL stage.

A **triage decision** is the adjuster's determination — after reviewing the AI copilot triage summary — of how to proceed. It answers four questions:

- Is the incident potentially covered under the active policy?
- Are there immediate flags (waiting period, back-to-back claims, repeat claimant) requiring investigation?
- What documents are missing and must be collected?
- Does this case require escalation to a senior claims manager?

The triage decision belongs entirely to the adjuster. The copilot provides information to support that decision — it does not make the decision.

Claims stage	What happens	POC scope
1. FNOL Registration	Adjuster uploads form and documents. FNOL ID generated. Triage triggered.	In scope
2. Triage	AI copilot generates summary. Adjuster reviews. Decision recorded.	In scope
3. Investigation	Surveyor dispatched. Additional documents collected.	Out of scope
4. Assessment	Loss quantified. Liability established.	Out of scope
5. Settlement	Settlement offer and payment processed.	Out of scope

2. What are the valid FNOL incident types?

The incident type is selected from the dropdown on the FNOL Registration Form. It drives coverage section mapping, document checklist, and escalation rules.

Code	Description	FIR required?	Coverage triggered
ACCIDENT_OWN	Own vehicle damage — no third party	Recommended	Own Damage (S.I)
ACCIDENT_WITH_THIRD_PARTY	Accident with third-party vehicle	Mandatory	OD + TP Property (S.I+II)
ACCIDENT_WITH_THIRD_PARTY_INJURY	Accident with TP bodily injury	Mandatory	OD + TP Property + TP Bodily Injury
THEFT_COMPLETE	Complete vehicle theft	Mandatory	Own Damage — Theft (S.I Cl.1d)
THEFT_PARTIAL	Partial theft (parts stolen)	Mandatory	Own Damage — Theft partial
FIRE	Vehicle fire or explosion	Mandatory	Own Damage — Fire (S.I Cl.1b)
FLOOD_OR_NATURAL_Calamity	Flood, cyclone, hailstorm, earthquake	Recommended	Own Damage — Natural Perils (S.I Cl.1c)
VANDALISM	Malicious damage, riot, strike	Mandatory	Own Damage — Malicious Act (S.I Cl.1e)
THIRD_PARTY_CLAIM_ONLY	TP claims against insured — no own damage	Mandatory	Third-Party Liability (S.II)
PERSONAL_ACCIDENT	Driver or passenger personal accident	Recommended	PA Cover (PA Schedule)
OTHER	Incident not in standard list	Case by case	To be determined by adjuster

3. What is the FNOL registration procedure?

Step	Who	Action	Output
1	Adjuster	Complete FNOL Registration Form (.docx) — table header must read 'FNOL Registration Form'. Save.	Completed .docx ready for upload.
2	Adjuster	Upload form via Streamlit UI.	Agent parses form. Field validation runs.
3	System	Validates mandatory fields. Lists missing fields if any. Pauses triage.	Validation pass or missing field list.
4	Adjuster	Upload supporting documents (FIR, RC, DL, Vehicle Damage Photo Log, etc.).	Documents stored. Document agent checks against required list.
5	Adjuster	Click Submit.	Agent pipeline starts. Est. 30–60 seconds.
6	AI Agent	Orchestrates: policy retrieval → coverage → exclusions → waiting period → claims history → document gap → escalation → aging risk.	Triage summary assembled.
7	System	Triage summary displayed in collapsible sections.	Adjuster reviews.
8	Adjuster	Review summary. Use Q&A; panel for follow-up questions.	Q&A; responses with source references.
9	Adjuster	Click Save Triage Summary.	PDF + JSON saved. FNOL register updated.

Mandatory fields on the FNOL Registration Form

Field	Mandatory?	Validation rule
FNOL Date	Yes	Auto-populated on upload
Member ID	Yes	Must match a member in policy register
Policy Number	Yes	Must match an active policy
Vehicle Registration Number	Yes	Must return active policy in policy_register.xlsx
Incident Date and Time	Yes	Must not be a future date. Checked against policy inception.
Incident Type	Yes	Must match standard taxonomy (dropdown)
Incident Location	Yes	Free text — city, state, or address
Damage Description	Yes	Minimum 20 characters
Third-Party Involved	Yes	Yes / No
Third-Party Injury Reported	Conditional	Required if Third-Party Involved = Yes
FIR Filed	Conditional	Required for incident types where FIR is mandatory
FIR Number and Police Station	Conditional	Required if FIR Filed = Yes
Legal Notice or Tribunal Reference	Yes	Yes / No — triggers immediate escalation if Yes
Claim Type Preferred	Yes	Cashless / Reimbursement
Adjuster ID	Yes	Identifier of the adjuster registering the FNOL

4. What documents are required for each incident type?

The AI copilot generates a document gap checklist from document_matrix.json. Documents are Blocking (claim cannot progress without it), Mandatory (claim can proceed but must be collected), or Recommended. The copilot identifies missing documents — it does NOT contact the claimant. The adjuster must raise collection requests.

Document	Incident types	Criticality	Collect by
FIR copy	ACCIDENT_WITH_THIRD_PARTY, ACCIDENT_WITH_THIRD_PARTY_INJURY, THEFT_COMPLETE, THEFT_PARTIAL, FIRE, VANDALISM, THIRD_PARTY_CLAIM_ONLY	BLOCKING	At FNOL or within 7 days
RC copy	All types	BLOCKING	At FNOL or within 48 hours
DL copy (driver at time of incident)	All types	BLOCKING — void if expired	At FNOL or within 48 hours
Vehicle Damage Photo Log	All own-damage types	BLOCKING	At FNOL
Repair estimate (authorised garage)	All own-damage types	MANDATORY	Within 7 days
Key surrender confirmation	THEFT_COMPLETE	BLOCKING	Within 48 hours
NOC from financier	THEFT_COMPLETE (hypothecated only)	BLOCKING — legally required	Within 7 days
TP vehicle RC and DL	ACCIDENT_WITH_THIRD_PARTY, ACCIDENT_WITH_THIRD_PARTY_INJURY	MANDATORY	Within 7 days
TP injury / medical report	ACCIDENT_WITH_THIRD_PARTY_INJURY	MANDATORY	Before assessment
Claimant bank account details	All reimbursement claims	MANDATORY	Before settlement
Witness statement	ACCIDENT_WITH_THIRD_PARTY, ACCIDENT_WITH_THIRD_PARTY_INJURY	RECOMMENDED	As available

5. What are the 10 sensitive case conditions and what must the adjuster do?

A sensitive FNOL case carries elevated legal, regulatory, financial, or fraud risk. The AI agent evaluates 10 conditions using Python conditional logic. When any condition is met, the escalation flag is set automatically — the agent cannot override or suppress it.

Condition	Trigger	Adjuster must
High-value claim	IDV > Rs.5,00,000 AND major incident (theft, TP injury, fire)	Refer to senior. Do not proceed.
Third-party bodily injury	TP injury = Yes on FNOL form	Refer to senior. No liability statement to claimant.
Theft with active loan	THEFT_COMPLETE AND vehicle is hypothecated	Refer to senior. Financer notification. NOC required.
Incident in waiting period	Incident date within 30 days of policy inception	Do not communicate coverage finding. Senior review mandatory.
Back-to-back claims	Prior claim filed within 30 days of current incident	Refer to senior for pattern review.
Late FNOL (over 7 days)	FNOL received more than 7 days after incident date	Request written explanation from claimant. Refer to senior.
Legal notice or MACT tribunal	Legal notice = Yes on FNOL form	Immediate hold. No claimant contact without legal approval.
Incident before policy start date	Incident date is before policy inception date	Critical exception. Immediate hold. Do not communicate anything.
Policy not found	Vehicle registration returns no active policy	Immediate hold. Verify registration. Refer to senior.
Repeat claimant	3 or more claims in preceding 12 months across all policies	Surface for senior awareness. Does not block triage independently.

What the adjuster must NOT do for any escalated case

Do NOT communicate coverage finding, admissibility, or settlement indication to claimant before senior manager has reviewed.

Do NOT contact claimant in legal notice or MACT cases without legal team approval.

Do NOT make an inadmissibility determination without senior countersignature.

6. What are the IRDAI SLA obligations and aging risk levels?

Activity	Timeframe	Basis
Acknowledgement to claimant	Within 24 hours of FNOL receipt	IRDAI Motor Claims Settlement Guidelines, Clause 4.1
Triage summary generation	Within 60 seconds of form upload	Internal POC SLA
Adjuster first review	Within 4 hours (Tier 1-2). Within 2 hours (Tier 3-4).	Internal POC SLA
Triage decision recorded	Within 1 business day of FNOL receipt	IRDAI Motor Claims Settlement Guidelines, Clause 4.2
Document collection request	Within 3 business days	IRDAI Motor Claims Settlement Guidelines, Clause 5.1
Cashless pre-authorisation	Within 2 hours of garage intimation	IRDAI Cashless Facility Guidelines

Aging risk	FNOL age	Adjuster action
LOW (Green)	0 to 6 hours	Routine. Review in normal course.
MEDIUM (Amber)	6 to 18 hours	IRDAI 24-hour acknowledgement SLA approaching. Complete triage within 2 hours.
HIGH (Orange)	18 to 24 hours	SLA at risk. Complete triage immediately. Claimant acknowledgement must go out.
CRITICAL (Red)	Over 24 hours	IRDAI SLA breached. Escalate to supervisor. Record reason for delay.

7. What are the triage decision options and how is the summary saved?

7.1 Adjuster review checklist

- Coverage: for MODERATE or LOW sections, verify independently or use Q&A; panel before relying.
- Exclusions: for each flagged exclusion, determine whether it applies. Document reasoning if overriding a flag.
- Waiting period: if active, do not communicate coverage finding without senior countersignature.
- Claims history: assess repeat claimant and back-to-back flags. Document own assessment.
- Documents: for each blocking missing document, raise a collection request. Copilot does NOT contact claimant.
- Escalation flag: if triggered, refer to senior before any determination is communicated.
- Aging risk: HIGH or CRITICAL claims must be triaged before other claims.

7.2 Triage decision options

Decision	Meaning	Next action
PROCEED TO INVESTIGATION	Coverage applicable. No blocking docs missing. No escalation.	Claim moves to investigation. Surveyor dispatch if required.
PENDING DOCUMENTS	Claim cannot progress until blocking documents are received.	Document collection request raised. Status: <code>PENDED_FOR_INPUTS</code> .
PENDING COVERAGE CLARIFICATION	Coverage uncertain — LOW confidence or data conflict.	Adjuster initiates manual policy review or raises with underwriting.
ESCALATED	Sensitive case condition triggered. Senior manager required.	Claim held. Awaits senior instruction.
INADMISSIBLE — REFER TO SENIOR	Waiting period active or incident predates policy inception.	Senior countersignature mandatory before any rejection is communicated.

7.3 Saving the triage summary

- Click 'Save Triage Summary' in the Streamlit UI.
- System saves: `FNOL-YYYY-NNNN_triage.pdf` (adjuster records) and `FNOL-YYYY-NNNN_triage.json` (full triage state).
- `fnol_register.xlsx` is updated with file paths and triage status.
- On Render free tier files are session-scoped — download the PDF immediately after saving.

FNOL-SOP-001 · v2.1 Addendum · July 2026

FNOL Registration and Triage — Procedures

Claims Adjuster Reference · Pinecone RAG Knowledge Base · IRDAI Motor Insurance

SOP ADDENDUM — This section adds one escalation condition to the Section 5 table so the escalation condition list in this SOP stays consistent with FNOL-GUIDE-001 Section 13. The full fraud signal indicator catalog, scoring methodology, and mandated adjuster-facing phrasing are documented in FNOL-GUIDE-001 Section 13 only — this addendum does not repeat them.

8. What is the fraud signal indicator escalation condition?

A separate analysis layer, the fraud signal agent, evaluates 12 indicators of possible elevated-review interest (see FNOL-GUIDE-001 Section 13.2) and produces a fraud score, a band (LOW / MEDIUM / HIGH), and a confidence level reflecting data completeness. This is distinct from the 10 sensitive case conditions in Section 5 above, though two of those conditions (back-to-back claims, repeat claimant) share underlying data with two of the 12 indicators.

When the fraud signal band is HIGH, the agent automatically adds an 11th escalation condition to the Section 5 table. This condition is evaluated by Python conditional logic in the same way as the original 10 — the AI agent cannot override or suppress it. MEDIUM and LOW fraud signal bands do not independently trigger escalation.

Condition	Trigger	Adjuster must
Elevated review indicators	Fraud signal band = HIGH (fraud score of 6 or more, out of a possible 12 weighted indicators)	Refer to SIU for further review. Adjuster to determine next steps. Does not by itself constitute a fraud finding.

This SOP addendum lists the escalation condition only. It does not restate the indicator catalog, scoring bands, mandated phrase substitutions, or confidentiality rules for fraud signal detail — adjusters and the AI copilot must refer to FNOL-GUIDE-001 Section 13 for that content. Fraud signal detail (score, band, confidence, and per-indicator breakdown) is shown to the adjuster across the FNOL registration confirmation screen, the Query FNOL screen, and the full triage summary (PDF and JSON), consistent with FNOL-GUIDE-001 Section 13.6.

Note: Section 7.2 of this SOP (triage decision options) is unaffected by this addendum. A HIGH fraud signal band routes through the existing ESCALATED decision option — it does not introduce a new triage decision type.
